

ASNS / LYPLA1 by subtype | same UMAP and color scale within each gene

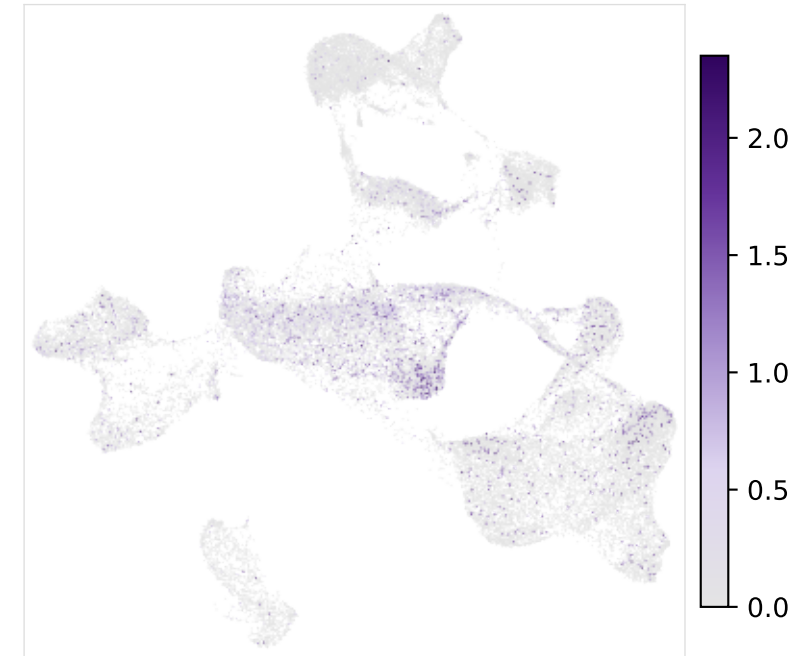

ASNS | ER+ | 38241 cells

ASNS | HER2+ | 19311 cells

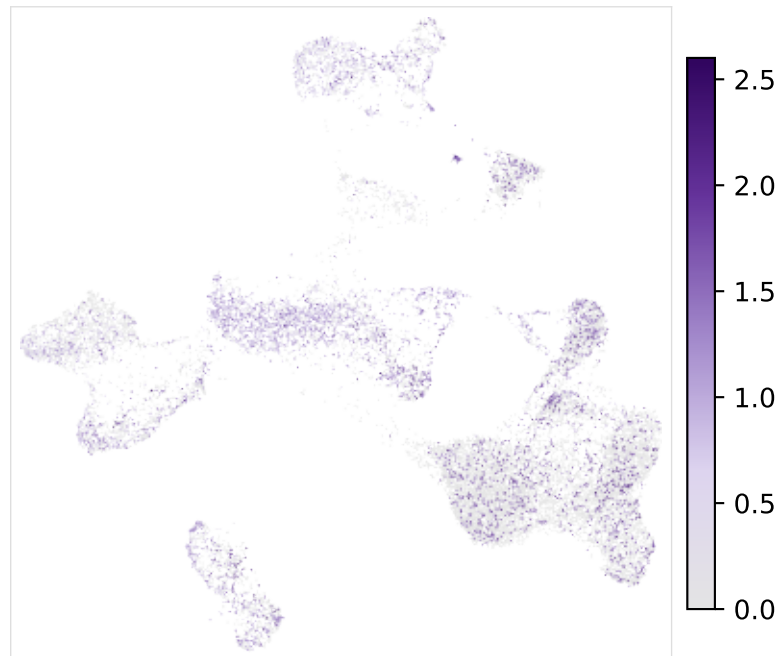

ASNS | TNBC | 42512 cells

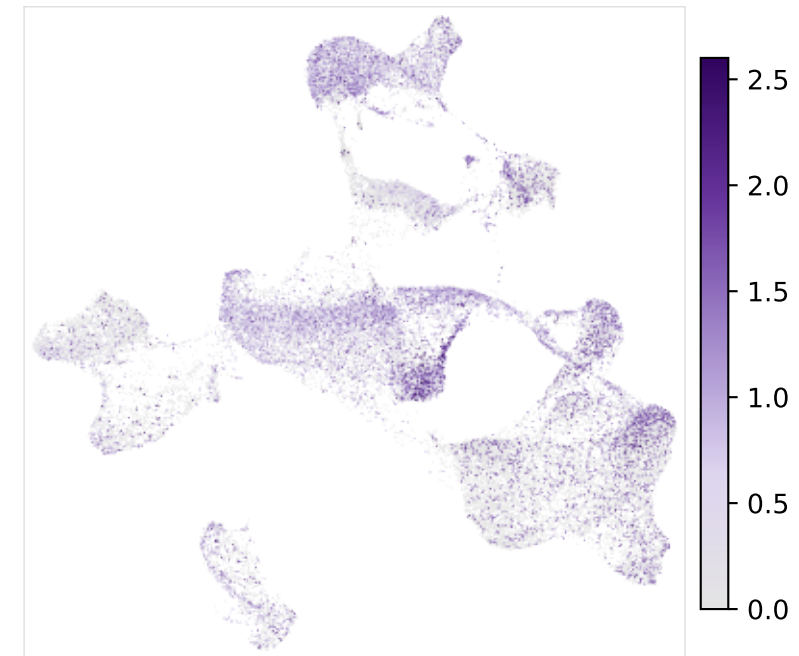

LYPLA1 | ER+ | 38241 cells

LYPLA1 | HER2+ | 19311 cells

LYPLA1 | TNBC | 42512 cells

Cells retain their original coordinates; not separate subtype embeddings. Point density is not donor-weighted. Same gene uses same color cap across subtypes; no formal subtype test or treatment adjustment.
