

LYPLA1 | normal versus malignant epithelium in PRAD tumors

Normal epithelium
2,200 cells

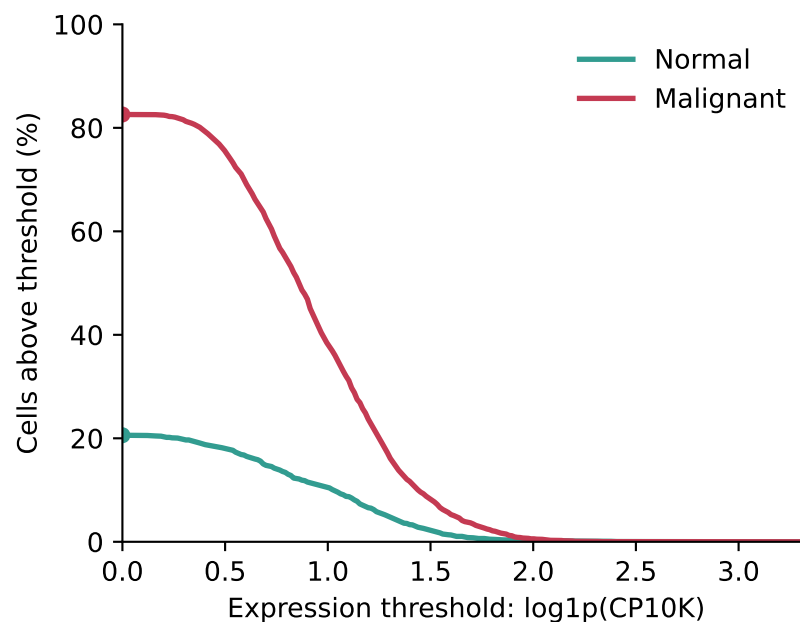

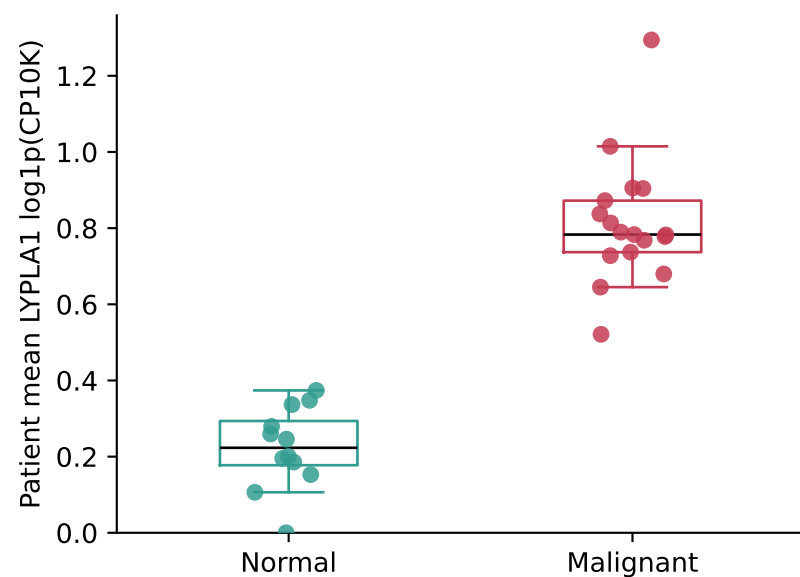

Malignant epithelium
3,157 cells

mean = 0.224
n = 12 patients

mean = 0.815
n = 17 patients

Top: same source UMAP and color scale; random draw order. Bottom left: patients with ≥ 20 cells. Bottom right: all cells, descriptive distribution. No differential-expression P value is implied.
